

# HTML Learning Resources

## Adding Attributes:

### 1) **Style Attribute** - Syntax

```
<h1 style = "color : red;">
```

Tag name      Property      Value

### 2) **Id attribute** - Syntax

```
<tag id=" " > text </tag>
```

### 3) **Title Attribute** - Syntax

```
<element title = "text">
```

used as an element's tooltip text

### 4) **Class Attribute** - Syntax

```
<style>  
  .Class name{ CSS properties }  
</style>
```

## Styling with CSS:

<code>id="myid"</code>	ID Selector	<code>#myid</code>
<code>class="myclass"</code>	Class Selector	<code>.myclass</code>

## Some Parameters Syntax and their purpose:

<u>Parameter Syntax</u>	<u>Purpose</u>
<code>text-align: center;</code>	Align the text to the center
<code>background-color : value;</code>	Set the background color to any color
<code>width: value px ; margin: auto;</code>	To fit the background color to the text
<code>font-size: value;</code>	To change the font size
<code>font-weight: bolder;</code>	Make the font bold
<code>color: value;</code>	To change the font color
<code>border-radius: 3px;</code>	To make the corners rounded by adding some border radius
<code>padding: 10px 10px 10px 10px;</code>	To add some space on all the four sides, say, 10px padding.
